

Pedagogy

Pedagogy is the most commonly understood approach to teaching; it is the theory and practice of learning and how this influences how children develop and learn.

As practitioners we believe the main approach used in our setting is 'The Constructivist approach'

As all children are unique, we are continually focused on the idea of children and adults working together to achieve their best outcome, this means that we continually use different approaches to meet their needs as they learn and grow.

An effective Pedagogical approach enables children to reach their full potential by providing a strong foundation for learning.
